BUSNIESS: Copy Writing, Online Advertising, E commerce Web Development
TECHNICAL: JavaScript, Python, Ruby, Ruby on Rails, Node, Back-end Architecture, DevOps, Front-end Architecture, JavaScript Libraries, Git, Unit Testing, CSS/SASS, User Experience, React, Redux, PostgreSQL

PROJECTS

Swag Dragon   Feb. 2020 - Apr. 2020
 A platform as a service to build a web store, upload designs, and create products, all while plugging into scalablepress.com to drop ship your product.
Tech Stack: Next JS | Node JS | PostgresSQL
- Worked as both a project manager and a lead developer overseeing 6 web developers
- Built integrations with Scalable Press's APIs
- Oversaw the teams tasks and set milestones for the client

Sup 2 U   Aug. 2019 - Oct. 2019
An application brings local restaurants, and customers together by allowing businesses to showcase and advertise their delectable creations, while allowing customers to benefit from each others shared experiences via reviews, and ratings.
Tech stack: Ruby on Rails | React | Google Maps | PostgreSQL
- Worked along side Engineers at Weed Maps
- Worked as a developer on both the front end and back end aspects along side 7 others
- Utilized tools built by google to create an algorithm for accurately finding locations around the world
- Built an online ordering system so customers can order from restaurants using our application so it an be delivered to them

Live Safe   Apr. 2019 - July 2019
This project gives users a one-stop shop for quantifying the risks of natural disasters for a particular zip code in the US. It displays several layers of data, including different kinds of disasters and timeframes (present, predictions, etc.)
Tech stack: React | Node | Flask | PostgreSQL | Mapbox
- Served as Full Stack developer on a cross functional team of 7, featuring 3 data scientists and 4 developers
- Created interactive map display of natural disasters in the U.S. incorporating historical and present information sourced by team's data scientists
- Wrote a back end server to handle data for the application

Slackr   May 2019 - June 2019
A management tool that helps managers run daily stand-up reports asynchronously to maximize efficiency and let team members submit reports any time of day.
Tech stack: React | Express | 0Auth | PostgreSQL
- Focused on front-end development and assisted other developers in the creation of a dynamically changing database
- Inherited code structure and database through a legacy project, improving upon any bugs or needed features

Mentor Me   Mar. 2019 - Mar. 2019
App that brings student and teacher communication into a one-on-one atmosphere.
Tech stack: React | Redux
- Worked With React and Redux to create a comprehensive interface for connecting users
- Built the front-end user interface, with a special emphasis on UI design
- Responsible for constructing a login system that handled multiple roles and requests

Use My Tech Stuff   Feb. 2019 - Feb. 2019
Marketing App to connect consumers with owners of high end electronic products for rent.
Tech stack: CSS | JavaScript
- Worked collaboratively with a team of 4 to create a meaningful site to inform and direct potential users to the application
- Wrote all copy and designed site independently from the rest of the team

EMPLOYMENT

Lambda School, *Team Leader*, Remote   Apr. 2019 - Current
- Conduct stand-up meetings with up to 10 students to discuss problem solving strategies and facilitate a team like environment
- Manage DevOps for individual teams that are building web applications
